Dear Hiring Team,

I am excited to apply for the Data Analytics Intern - Business Intelligence role. With a strong foundation in data engineering, analytics, and business intelligence, I bring both technical expertise and a collaborative approach that align closely with the responsibilities outlined for this position.

At Northeastern University, where I am pursuing my Master's in Information Systems, I have developed advanced skills in SQL, Python, and data modeling. My professional experience as a Support Administrator allowed me to improve reporting accuracy by 20% using Tableau, Excel, and Cognos, and to resolve data issues through system validation and root cause analysis. Prior to that, at Byteridge, I integrated APIs and optimized reports, gaining valuable experience in troubleshooting and collaborating across teams to deliver efficient solutions.

Beyond coursework and roles, I have built interactive dashboards in Tableau and Power BI, designed dimensional models in Snowflake and Databricks, and worked on large-scale data cleaning and transformation pipelines. These experiences have prepared me to not only process and analyze datasets but also to develop reporting solutions stakeholders can rely on. I am equally comfortable documenting processes and communicating findings to both technical and non-technical audiences.

What excites me about this opportunity is the chance to work at the intersection of data engineering and business intelligence, troubleshooting issues, maintaining reliable reporting pipelines, and collaborating with cross-functional teams to propose actionable solutions. I am confident that my blend of technical skills, problem-solving ability, and communication strengths will allow me to contribute effectively from day one.

I would welcome the chance to bring my skills and energy to your team and support its mission of delivering high-quality data solutions to stakeholders. Thank you for considering my application, I look forward to the possibility of contributing.

Sincerely,
Geetika Barla
